

THERMAL IMAGING INFORMATION SHEET

EC009201

PRICE STARTING FROM \$295 + GST

WHAT IS THERMAL IMAGING?

Thermal imaging is the process of **reading** and **analysing** the thermal radiation emitted from electrical items to determine an accurate **thermal temperature**. By determining thermal temperature, thermal imaging can gauge the **safety** of electrical components not seen by the naked eye, allowing for **preventative maintenance** to be carried out prior to **infrastructure failure**.

WE CONDUCT THERMAL IMAGING ON:

- Electrical panels
- Electrical and mechanical switch boards
- Electrical motors
- Battery systems

OUR TECHNICIANS HOLD 'A' GRADE ELECTRICAL LICENSES

THERMAL IMAGING IS ESSENTIAL TO IDENTIFYING ISSUES WITHIN YOUR
ELECTRICAL INFRASTRUCTURE BEFORE THEY BECOME MAJOR ISSUES OR
RESULT IN INFRASTRUCTURE FAILURE
